About

About

E-Commerce Customer Growth Analytics & personalization

A comprehensive business intelligence tool designed to transform raw transactional data into actionable growth strategies. This system utilizes advanced behavioral analytics to identify customer value and retention opportunities.

RFM Segmentation Framework

- **Recency:** Analysis of days since the last transaction to detect fading engagement.
- **Frequency:** Monitoring purchase patterns to identify habitual vs. one-time buyers.
- **Monetary:** Evaluation of total revenue contribution per unique customer.

By combining these metrics, the system segments the database into actionable groups such as **Champions**, **Loyalists**,

Technical Implementation

- **Data Pipeline:** Developed using Python for high-performance cleaning and outlier management.
- **Analytics Logic:** SQL-based structured querying for precise segment calculation.
- **Interface:** Interactive Power BI environment featuring DAX-driven real-time insights.
- **Developers :** Shashikant Wankar & Tushar Burde.

Action Plan

A. High Value (Champions & Loyalists)

- **Goal:** Reward & Retention.
- **Recommendation:** Implement a VIP Loyalty Program. Offer early access to new product launches and exclusive "No-Shipping Fee" benefits.
- **Personalization:** Send "Thank You" notes with a referral code for their friends.

B. Mid-Tier (Potential & New Customers)

- **Goal:** Increase Frequency.
- **Recommendation:** Cross-sell related products based on their first purchase. Use "Complete the Look" or "Customers also bought" email triggers.
- **Personalization:** Provide a "Second Purchase" discount valid for 30 days.

C. Critical Risk (At-Risk & Hibernating)

- **Goal:** Re-engagement (Win-back).
- **Recommendation:** Aggressive "We Miss You" campaigns. Offer a high-value discount (20%+) that expires in 48 hours to create urgency.
- **Personalization:** Survey them to understand why they stopped buying (Product quality vs. Price vs. Delivery time).
